# Blockbuster Biologics Newsletter 2Q/3Q 2020 Update

Welcome to our quarterly update relating to biologics and biosimilars, including post-grant and patent litigation challenges to blockbuster biologics.

The BPCIA celebrated its 10-year anniversary on March 23, 2020. During the time it has been in force, 28 biosimilars have been approved 16, of which have launched. This past quarter saw the approvals of Hulio (adalimumab-fkjp) and Nyvepria (pegfilgrastim-apgf).

Strikingly, the number of post-grant challenges against biologics patents has precipitously dropped since reaching a peak in 2017 with only one inter partes review challenged filed thus far in USPTO fiscal year 2020. Notably, on July 7, 2020, Genentech and Amgen filed joint stipulations in the US District Court for the District of Delaware to dismiss their litigations concerning Amgen's Herceptin and Avastin biosimilars. On the legislative front, Representative Glenn Grothman (R-Wisconsin) introduced a new bill allowing for biosimilar insulins to automatically be granted interchangeability status thus allowing prescriptions to be filled with biosimilars without a prescribing physician's authorization.

We hope you find this update informative. As always, please feel free to reach out to us with any questions.

— Chris, Robin, Maria, and Kelly

# ***INTER PARTES* REVIEWS (IPR)**

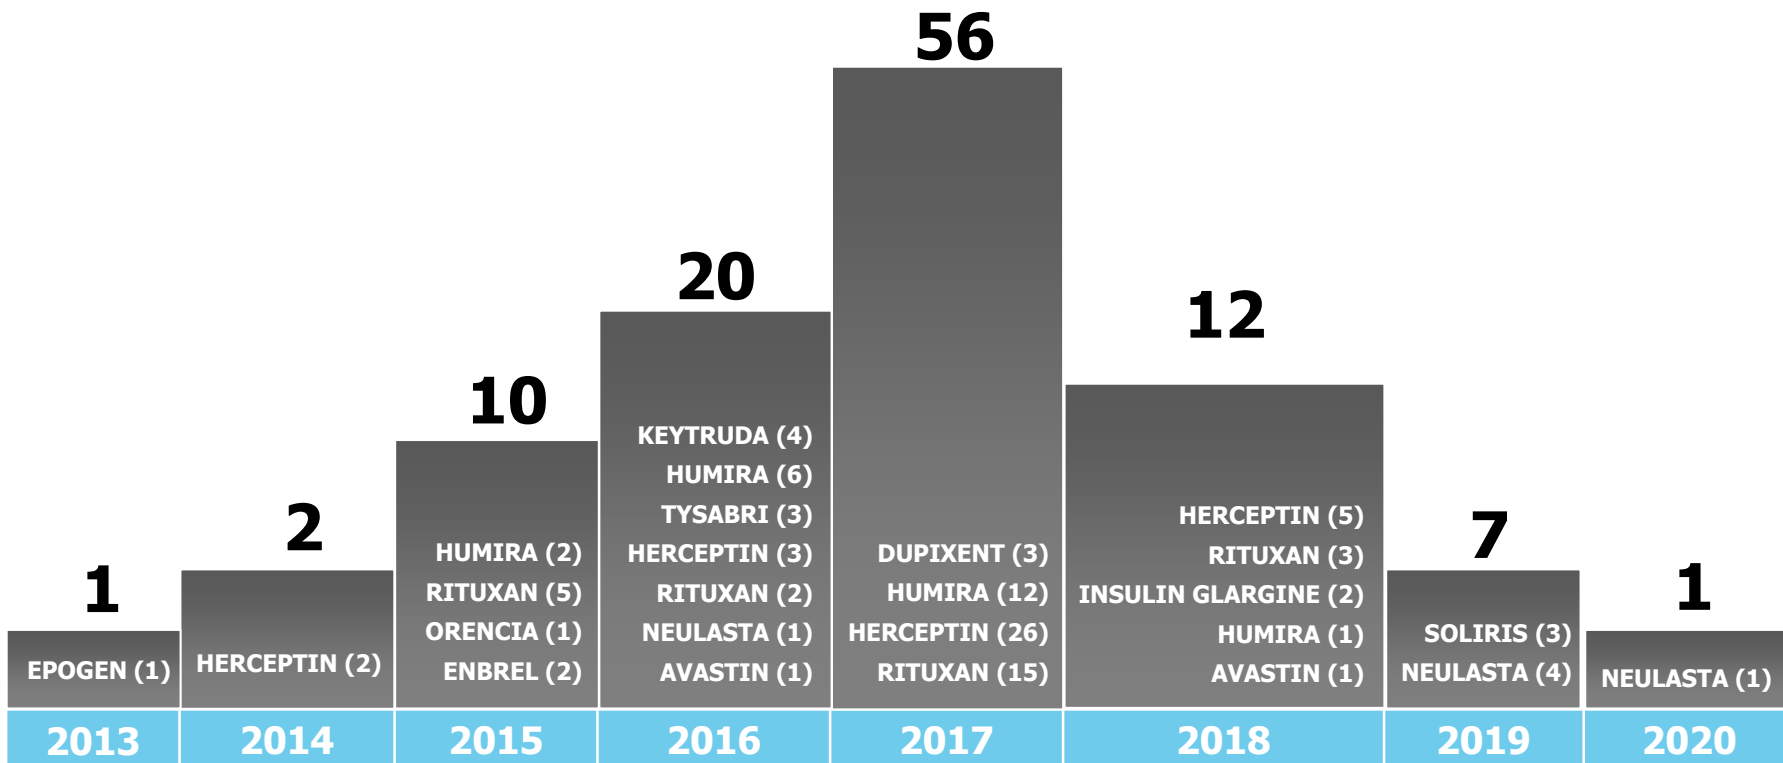

## > **Quick statistics:**

- > The current institution rate for IPR challenges to patents that claim biologics is 38% (excludes IPRs that have settled or otherwise been terminated)
- > Of those IPRs instituted and that have gone to final written decision (FWD), 43% have resulted in the challenged claims being held unpatentable, with 60% having mixed results

# LEGISLATIVE UPDATES

- > **Representative Glenn Grothman (R-Wisconsin) introduced a new bill allowing for biosimilar insulins to automatically be granted interchangeability status**
  - > Interchangeability status enables prescriptions to be filled with biosimilars without a prescribing physician's authorization
  - > HR 8190 would amend the Public Health Service Act portion of the BPCIA by deeming that "any insulin that is determined ... to be biosimilar to the reference product" would be interchangeable with the reference product

## Representative Claim

1. A stable liquid aqueous pharmaceutical formulation comprising:
  - a) a human IgG1 anti-human Tumor Necrosis Factor alpha (TNF $\alpha$ ) antibody, or an antigen-binding portion thereof, at a concentration of 20 mg/ml to 150 mg/ml;
  - b) a tonicity agent;
  - c) a surfactant; and
  - d) a buffer system having a pH of 4.0 to 8.0, wherein the antibody comprises the light chain variable region (LCVR) and the heavy chain variable region (HCVR) of D2E7.

## Representative Claim

1. A method of reducing signs and symptoms in a patient with moderately to severely active rheumatoid arthritis, comprising:
  - a) administering to said patient, in combination with methotrexate, a human anti-TNF $\alpha$  antibody;
  - b) wherein the human anti-TNF $\alpha$  antibody is administered subcutaneously in a total body dose of 40 mg once every 13–15 days; and
  - c) wherein the anti-TNF $\alpha$  antibody comprises an IgG1 heavy chain constant region; a V<sub>L</sub> chain region comprising a CDR1 having the amino acid sequence of SEQ ID NO:7, a CDR2 having the amino acid sequence of SEQ ID NO:5, and a CDR3 having the amino acid sequence of SEQ ID NO:3; and a V<sub>H</sub> chain region comprising a CDR1 having the amino acid sequence of SEQ ID NO:8, a CDR2 having the amino acid sequence of SEQ ID NO:6, and a CDR3 having the amino acid sequence of SEQ ID NO:4.

## Representative Claim

1. A stable liquid aqueous pharmaceutical formulation comprising:
  - a) a human IgG1 anti-human TNF $\alpha$  antibody, or an antigen-binding portion thereof, at a concentration of 45 mg/ml to 150 mg/ml;
  - b) a polyol;
  - c) a polysorbate at a concentration of 0.1 mg/ml to 10 mg/ml; and
  - d) a buffer system having a pH of 4.5 to 7.0, wherein the antibody comprises the LCVR and HCVR of D2E7.

## Representative Claim

1. A method of refolding proteins expressed in a non-mammalian expression system, the method comprising:
  - a) contacting the proteins with a preparation that supports the renaturation of at least one of the proteins to a biologically active form, to form a refold mixture, the preparation comprising:
    - i. at least one ingredient selected from the group consisting of a denaturant, an aggregation suppressor, and a protein stabilizer;
    - ii. an amount of oxidant; and
    - iii. an amount of reductant, wherein the amounts of the oxidant and the reductant are related through a thiol-pair ratio and a thiol-pair buffer strength, wherein the thiol-pair ratio is in the range of 0.001-100; and wherein the thiol-pair buffer strength maintains the solubility of the preparation; and
  - b) incubating the refold mixture so that at least about 25% of the proteins are properly refolded.

Hoffmann-La Roche Patent	Challenger(s)	IPR No.	# of P/PO Experts	2-Consid.	Claim Type	Status
8,163,522	Coalition for Affordable Drugs (Kyle Bass)	2015-01792	1/0	Y	M	Institution Denied
	Coherus	2017-01916	1/2	Y	M	Institution Denied
8,063,182	Coherus	2017-02066	1/2	Y	C	Institution Denied

## Representative Claim

1. A method comprising the steps of:
  - a) culturing a host cell with a polynucleotide, wherein the polynucleotide encodes a protein consisting of:
    - i. the extracellular region of an insoluble human TNF receptor, wherein the insoluble human TNF receptor has an apparent molecular weight of about 75 kilodaltons as determined on a non-reducing SDS-polyacrylamide gel and the amino acid sequence LPAQVAFXPYAPEPGSTC (SEQ ID NO:10); and
    - ii. all of the domains of the constant region of a human IgG immunoglobulin heavy chain other than the first domain of said constant region; and
  - b) purifying an expression product of the polynucleotide from the cell mass or the culture medium.

Coalition for Affordable Drugs (Kyle Bass)	2015-01792	1-10	NA	1/0	Y	M	Institution Denied
Coherus	2017-01916	1-10	NA	1/2	Y	M	Institution Denied

## Representative Claim

1. An isolated antibody that binds specifically to the polypeptide of SEQ ID NO:548.

Challenger(s)	IPR No.	Challenged Claims	Instituted Grounds	# of P/PO Experts	2-Consid.	Claim Type	Status
Coherus	2017-02066	2-36	NA	1/2	Y	C	Institution Denied

# DUPIXENT

> Three IPRs filed challenging one patent

Hofmann-LaRoche Patent	Challenger(s)	IPR No.	# of P/PO Experts	2-Consid.	Claim Type	Status
8,679,487	Sanofi-Aventis	2017-01879	1/1	N	C	FWD – Claims 1-14, 16, 17 patentable
	Sanofi-Aventis	2017-01129	2/0	N	C	Institution Denied
	Sanofi-Aventis	2017-01884	1/3	N	C	FWD – Claims 1-17 unpatentable

## Representative Claim

1. An isolated human antibody that competes with a reference antibody for binding to human IL-4 interleukin-4 (IL-4) receptor, wherein the light chain of said reference antibody comprises the amino acid sequence of SEQ ID NO:10, and the heavy chain of said reference antibody comprises the amino acid sequence of SEQ ID NO:12.

Challenger(s)	IPR No.	Challenged Claims	Instituted Grounds	# of P/PO Experts	2-Consid.	Claim Type	Status
Sanofi-Aventis	2017-01879	1-14, 16, 17	§ 102	1/1	N	C	FWD – Claims 1-14, 16, 17 patentable
Sanofi-Aventis	2017-01129	1-17	NA	2/0	N	C	Institution Denied
Sanofi-Aventis	2017-01884	1-17	§ 103	1/3	N	C	FWD – Claims 1-17 unpatentable

# SOLIRIS

> Three IPRs filed challenging three patents

Amgen Patent	Challenger(s)	IPR No.	# of P/PO Experts	2-Consid.	Claim Type	Status
9,725,504	Amgen	2019-00739	1/3	N	M	Terminated after Institution (settled)
9,718,880	Amgen	2019-00740	1/3	Y	C	Terminated after Institution (settled)
9,732,149	Amgen	2019-00741	1/3	Y	C	Terminated after Institution (settled)

## Representative Claim

1. A method of treating a patient suffering from paroxysmal nocturnal hemoglobinuria (PNH) comprising administering to the patient a pharmaceutical composition comprising an antibody that binds C5, wherein the antibody comprises a heavy chain consisting of SEQ ID NO:2 and a light chain consisting of SEQ ID NO:4.

Challenger(s)	IPR No.	Challenged Claims	Instituted Grounds	# of P/PO Experts	2-Consid.	Claim Type	Status
Amgen	2019-00739	1-10	§§ 102, 103	1/3	N	M	Terminated after Institution (settled)

## Representative Claim

1. A pharmaceutical composition for use in treating a patient afflicted with PNH, wherein the composition is a sterile, preservative free, 300 mg single-use dosage form comprising 30 ml of a 10 mg/ml antibody solution, wherein the antibody comprises a heavy chain consisting of SEQ ID NO:2 and a light chain consisting of SEQ ID NO:4.

Challenger(s)	IPR No.	Challenged Claims	Instituted Grounds	# of P/PO Experts	2-Consid.	Claim Type	Status
Amgen	2019-00741	1-3	§§ 102, 103	1/3	Y	C	Terminated after Institution (settled)

## Representative Claim

1. An antibody that binds C5 comprising a heavy chain consisting of SEQ ID NO:2 and a light chain consisting of SEQ ID NO:4.

Challenger(s)	IPR No.	Challenged Claims	Instituted Grounds	# of P/PO Experts	2-Consid.	Claim Type	Status
Amgen	2019-00740	1	§§ 102, 103	1/3	Y	C	Terminated after Institution (settled)

# INSULIN GLARGINE

- > Two IPRs filed challenging two patents

Sanofi Patent	Challenger(s)	IPR No.	# of P/PO Experts	2-Consid.	Claim Type	Status
7,476,652	Mylan	2017-01526	3/2	Y	F	FWD – Claims 1-25 unpatentable
7,713,930	Mylan	2017-01528	3/2	Y	F	FWD – Claims 1-20 unpatentable

**Representative Claim**

1. A pharmaceutical formulation comprising Gly(A21), Arg(B31), Arg(B32)-human insulin; at least one chemical entity chosen from polysorbate 20 and polysorbate 80; at least one preservative; and water, wherein the pharmaceutical formulation has a pH in the acidic range from 1 to 6.8.

Challenger(s)	IPR No.	Challenged Claims	Instituted Grounds	# of P/PO Experts	2-Consid.	Claim Type	Status
Mylan	2017-01526	1-25	§ 103	4/2	Y	F	FWD – Claims 1-25 unpatentable

**Representative Claim**

1. A pharmaceutical formulation comprising Gly(A21), Arg(B31), Arg(B32)-human insulin; at least one chemical entity chosen from esters and ethers of polyhydric alcohols; at least one preservative; and water, wherein the pharmaceutical formulation has a pH in the acidic range from 1 to 6.8.

## Representative Claim

11. A housing part for a medication dispensing apparatus, said housing part comprising: a main housing, said main housing extending from a distal end to a proximal end; a dose dial sleeve positioned within said housing, said dose dial sleeve comprising a helical groove configured to engage a threading provided by said main housing, said helical groove provided along an outer surface of said dose dial sleeve; a dose dial grip disposed near a proximal end of said dose dial sleeve; a piston rod provided within said housing, said piston rod is non-rotatable during a dose setting step relative to said main housing; a drive sleeve extending along a portion of said piston rod, said drive sleeve comprising an internal threading near a distal portion of said drive sleeve, said internal threading adapted to engage an external thread of said piston rod; and, a tubular clutch located adjacent a distal end of said dose dial grip, said tubular clutch operatively coupled to said dose dial grip, wherein said dose dial sleeve extends circumferentially around at least a portion of said tubular clutch, and wherein said helical groove of the dose dial sleeve has a first lead and said internal threading of said drive sleeve has a second lead, and wherein said first lead and said second lead are different.

Pfizer	2019-00979	1-3	§ 103	3/3	Y	Pen-type injector	FWD – All challenged claims unpatentable

## Representative Claim

51. A clutch for use within a pen type drug delivery device, said clutch comprising a tubular body, said tubular body extending from a distal end to a proximal end; and said distal end of said tubular body having a diameter sized such that said distal end of said tubular body may be positioned within a proximal end of a dial member.

**Representative Claim**

21. A drug delivery device comprising: a housing comprising a dose dispensing end and a first thread; a dose indicator comprising a second thread that engages with the first thread; a driving member comprising a third thread; a sleeve that is (i) disposed between the dose indicator and the driving member and (ii) releasably connected to the dose indicator; a piston rod comprising either an internal or an external fourth thread that is engaged with the third thread; a piston rod holder that is rotatably fixed relative to the housing and configured to (i) prevent the piston rod from rotating during dose setting and (ii) permit the piston rod to traverse axially towards the distal end during dose dispensing; wherein: the housing is disposed at an outermost position of the drug delivery device; the dose indicator is disposed between the housing and the sleeve and is configured to (i) rotate and traverse axially away from the dose dispensing end during dose setting and (ii) rotate and traverse axially towards the dose dispensing end during dose dispensing; the driving member is configured to rotate relative to the piston rod; the sleeve is rotatably fixed relative to the driving member and configured to traverse axially with the dose indicator; and the piston rod and the driving member are configured to rotate relative to one another during dose dispensing; and the piston rod is configured to traverse axially towards the dose dispensing end during dose dispensing.

## Representative Claim

1. A drive mechanism for use in a drug delivery device comprising: a housing comprising a helical thread; a dose dial sleeve having a threaded surface that is engaged with the helical thread of the housing, an insert provided in the housing, where the insert has a threaded circular opening; a drive sleeve releasably connected to the dose dial sleeve and having an internal helical thread; a piston rod having a first thread and a second thread, wherein the first thread is engaged with the threaded circular opening of the insert and the second thread is engaged with the internal helical thread of the drive sleeve; and a clutch located between the dose dial sleeve and the drive sleeve, wherein the clutch is located (i) radially outward of the drive sleeve and (ii) radially inward of the dose dial sleeve.
