

Morgan Lewis

EDATA GLOBAL

THE BEST OF TECHNOLOGY AND MOBILITY

EU DATA CENTER

ENHANCED SERVICES

The expanded Morgan Lewis eData practice provides our EU clients with the benefit of full forensic collection capability without the potential for a large financial expenditure or major business interruption.

Our EU collection kits, which reside in our UK-based data center, come fully equipped with custodian consent forms and can be used for targeted document collections or full forensic imaging.

These kits are secure and easy to deploy. The USB drive requires a six-digit code for access, and the contents are completely encrypted with 256-bit military-grade Advanced Encryption Standard hardware. Once imaging or targeted file acquisition is complete and a drive is unplugged, it locks automatically. No installation is necessary.

Our file collection tool and computer imaging components use industry-standard technology that has been in use in the eDiscovery industry for more than 12 years, and we have deployed more than 500 kits in multiple countries on hundreds of matters.

FAST FACTS

- Each collection kit contains built-in custodian consent forms, a targeted collection tool, and a full forensic imaging tool.
- Full documentation with descriptive “how to” guides and images that quickly guide users on how to connect the device and complete collection.
- Both the targeted and the full forensic image processes are completely logged, and files or images are verified via hash values to confirm accuracy and completeness.
- Each kit is equipped with a class A data finder tool that creates a report of the volume of user-created data on the target computer.
- Collection kits support Windows XP, Windows 7 (32 and 64 bit), Mac/OS X, and Microsoft Surface.

AVAILABLE SERVICES

Full or targeted lawyer-guided collection

Collection consulting

Collection technical support

Installation and setup

Application support

Hardware support

SCALABLE DOCUMENT REVIEW

Our UK-based data center offers LAW, Relativity, and Equivio, giving our clients the same robust data processing, hosting, review, and production capability in the European Union that we have in the United States. Relativity is an industry-leading, fast, and scalable document review platform. Our EU data center adheres to EU data protection rules regarding transfers of personal data outside the EU, giving you the assurance of compliance with these rules whilst gaining the benefits of our edata review and production capabilities. If you prefer to access the data remotely outside the EU, our team will work with you to comply with EU data protection laws.

BENEFITS OF RELATIVITY, LAW, AND EQUIVIO

Relativity security is robust, dynamic, and granular. It can restrict users from creating screenshots, copying text, and printing documents. Permissions are granted by system administrators.

Relativity and LAW have the ability to handle multiple languages and allow users to review in foreign languages in their native format. Relativity goes beyond Unicode compliance to support a large range of other source encoding types that accommodate multiple language documents and review.

Our seamless use of Equivio's best-of-breed technology-assisted review (TAR) within Relativity provides integrated document review and analysis. Equivio adds advanced email threading, near duplicated analysis, and predictive coding to provide flexible solutions that can dramatically decrease review time and costs.

RELATIVITY

Flexible: Automated custom workflows meet the unique requirements of each case

Intuitive: Users can learn basic functionality in 10 minutes

Intelligent: Relativity shows patterns in data, so companies can investigate trends and make smarter decisions

EQUIVIO

Foreign language detection

Near duplicate detection

Email thread application

Predictive coding analysis
